Successful Gardening starts with...

• Good:
  • Planning and Design
  • Soil Preparation
  • Plant Selection and Installation

• Maintenance:
  • Proper Soil Fertility (Use Wood Mulch)
  • Proper Irrigation (Drip Irrigation)
  • Use Integrated Pest Management

(Earth-Kind Principles and Practices)
Gardening Mistakes begin with...

• Poor planning and design
• No soil preparation
• Poor plant selection and installation
• Improper maintenance
  • Poor soil fertility
  • No mulch
  • Improper irrigation
  • Poor pest and disease prevention
Preventing and solving problems

- Start by evaluating whether or not the plant receives all it’s basic requirements:
  - Air, Sun, Water, Soil, Nutrients, Temperature
- Determine if the plant has any known problems
  - Don’t plant it, remove it, or use control measures
- Use the principles and practices of Integrate Pest Management to prevent or control insects, weeds and diseases
- Use only research-based information from the Extension Service (first Texas then other states)
