MEMO TO: Owners/Operators of Texas Feral Hog Buying Stations

SUBJECT: Resource Information Packet on Feral Hogs

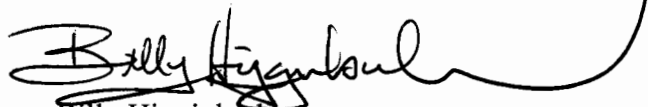

Please find the attached information regarding feral hog control, transportation and diseases/parasite issues. This packet has been assembled for your information and includes publications from AgriLife Extension as well as several additional state and federal agencies.

Your clientele of feral hog trappers can also obtain this same information from any county Extension office in Texas. In addition, we are continually updating our information based on the latest research findings in order to provide landowners and trappers with the best management practices available for abating feral hog damage through control efforts.

We also have additional resources including websites that are continually updated with feral hog information and each site contains a wealth of information on feral hogs and their control. Electronic versions of the publications in your packet can also be found on these websites: Coping With Feral Hogs (<http://feralhogs.tamu.edu>) , Plum Creek Project: (<http://pcwp.tamu.edu/feralhogs>) and Wild Wonderings Blog: (<http://wild-wonderings.blogspot.com>). Videos on feral hog control issues can be viewed on Youtube at <http://www.youtube.com/user/wfsceextension>.

If you have questions or need further information regarding feral hog issues in Texas, please don't hesitate to contact an Extension Wildlife Specialist or your local county Extension agent.

Sincerely,

Billy Higginbotham  
Extension Wildlife and Fisheries Specialist
