

DIMILIN FOR GRASSHOPPER CONTROL IN PASTURES

Dimilin 2L and 25W now registered for grasshopper control in improved pastures.

Dimilin has been labeled for rangeland for grasshopper control for several years. Now it has a full federal label for rangeland and pasture, improved pastures and similar areas used for production of native, domesticated forage plants for harvest for livestock primarily for grazing or mechanical harvest.

In short, we can recommend the product for grasshopper control in East Texas.

The restrictions are:

Do not exceed a total of 2.0 oz DIMILIN per acre per year.

Do not make more than 2 applications of DIMILIN per year.

Allow at least 1 day after treatment before cutting grass.

Applications may be made anytime after eggs begin to hatch. For optimum results, applications should be made when the majority of the nymphs have reached the 2nd to 3rd instar stage of development.

If two applications are made, rates for each application is 0.5 to 1.0 fl oz per acre

Note: This product is an insect growth regulator. As such, mortality or control may not be achieved until 5-7 days after application.
