

# Tidal Wave™ Petunias

*Full Sun*

*Height 18-20 inches, spread up to 4 feet*

*Tidal Wave Petunias come in a variety  
of different colors Purple, Cherry and Silver*

**Culture:** Tidal Wave™ Petunias Purple, Cherry and Silver have been tested in locations across Texas and been found to thrive in summer conditions. It was representative of a new class of petunias referred to as the trailing petunia. It is a great plant to use in hot color schemes where bright colors dominate. Or it can be toned down with softer flowers or foliage colors.

**Growth Habit:** Purple, Cherry and Silver varieties grow from 18- to 20- inches tall when spaced 1 foot apart. If planted at wider spacings, they will spread up to 4 feet but won't grow quite as tall. When spaced up to 2 feet apart, they will spread from 2.5 to 4 feet and not get quite as tall.

**Watering Habit:** It is important to remember that petunias don't like water on their flowers. Note that, after a rain, petunias close up and appear to be wilted. So, when you water, use a watering wand or drip irrigation system so plants are watered well at ground level.

**Notes:** Choose a bright, sunny location with at least 6 hours of direct sunlight. Sun is a must to keep your plants blooming and looking their best all season. Water and lightly fertilize after trimming to stimulate growth and flowering.
