

# Coral Bells

*Heuchera sanguinea*

***Partial shade/shade***

***1'-2' x 1'***

***Evergreen foliage***

***Pink, red blossoms, spring - early summer***

***Attracts  
hummingbirds***

**Culture:** Grow coral bells in partial shade to full shade. Morning sun is okay. Coral bells will thrive in most types of moist, well-drained soil except heavy clay. This plant has a medium heat tolerance. Plant nursery rooted plant in the fall or early spring. Propagate them by division in late fall or early spring.

**Growth Habit:** This evergreen perennial produces clumps of low spreading foliage to 1" wide. Its rounded leaves have attractive scalloped edges similar to strawberries. Leaf color depends on variety.

**Bloom:** Spikes (panicles) of small pink or red bell-shaped flowers are produced on stems ' - 2' in late spring – early summer.

**Notes:** This plant is attractive as a groundcover and great as a border plant in shade gardens and around deciduous shrubs.

***Coral Bells can be viewed in the Master Gardener's Demonstration Garden located behind Hood County Annex 1 on 1410 W. Pearl St, Granbury, Texas***
